ICEBERG

Website Design Brief

SELL-SIDE M&A AND CAPITAL RAISING · BOUTIQUE ADVISORS

March 2026 — Confidential

BRAND & DESIGN SPECIFICATION

The Iceberg website uses a navy dark theme — deep navy backgrounds with green as the primary action colour and sky blue as the secondary accent for intelligence signals and status indicators.

Colour Palette

- Background layers: #070E1C (base) → #0B1526 → #0F1D33 → #162640 → #1E334F (cards/elevated)
- Primary accent: #22C55E (Iceberg green) — buttons, CTAs, nav logo, section labels, highlights
- Primary light: #4ADE80 — hover states, fomo span text
- Secondary accent: #38BDF8 (sky blue) — match scores, deploy status, intro paths, warm signals
- Text hierarchy: #F8FAFC (white) → #E2E8F0 → #CBD5E1 → #94A3B8 → #64748B
- Borders: rgba(255,255,255,0.08) standard · rgba(34,197,94,0.22) green border
- Grid overlay: very subtle sky blue dot grid — rgba(56,189,248,0.025) — at 64px spacing

Typography

- Headings: Plus Jakarta Sans — weights 700, 800. Letter-spacing -1.5px to -2.5px for impact.
- Body: DM Sans — weights 300, 400, 500. Clean and readable at all sizes.
- Labels / tags / mono: DM Mono — weight 400, 500. Used for section labels, badge text, stats.
- Google Fonts import: Plus Jakarta Sans (ital,wght@0,300–800;1,700) + DM Sans (300–500) + DM Mono (400,500)

Reference Sites

- rogo.ai — clean dark SaaS, sharp typography, professional finance-adjacent

- ansarada.com — execution-layer software, trustworthy, M&A adjacent

Interactive Features

- Live deal assistant: powered by Claude API (api.anthropic.com/v1/messages). Advisor describes a deal → receives a structured investor/buyer universe breakdown in-page.
- Loom video embed: https://www.loom.com/share/a2085c030d8041b782f072bda3044bf9 — shown in hero right column with mac window chrome.
- All cards and sections: fade-up on scroll (IntersectionObserver). Floating chips in hero have gentle bob animation.
- Trust strip: continuous horizontal scroll animation.
- Nav: fixed, blur backdrop, transparent-to-filled on scroll.

Page Structure — Top to Bottom

The page flows in this exact order. Each section is described in full below with copy, layout instructions, and designer notes.

Section order:

- 01 — Navigation bar (fixed)
- 02 — Hero (2-col: headline left, Loom video right)
- 03 — Social proof bar (4 stats)
- 04 — Trust strip (scrolling org logos)
- 05 — Deal assistant (live universe tool — placed early)
- 06 — Easy upload section (how simple it is)
- 07 — The problem (3 brutal truth lines + 3 stat cards)
- 08 — Use cases (3 cards: win big / off-track / unmapped sectors)
- 09 — The stack (3-row table: Sourcing → Iceberg → Closing)
- 10 — How it works (4 steps + universe map output card)
- 11 — Intro path intelligence (pathway cards)
- 12 — Intelligence layer (contact asset + enriched contact card)
- 13 — Dynamic re-ranking (ranked feed + trigger list)
- 14 — The network effect / FOMO (compounding flywheel)
- 15 — Why Iceberg (comparison vs tool stack)
- 16 — Pricing (4-tier node pricing)
- 17 — Pilot CTA (full-width dark close)
- 18 — Footer

SECTION 01

Navigation Bar

[DESIGNER NOTE: Fixed top bar. Navy background rgba(7,14,28,0.92) with blur backdrop. Green logo icon. Collapses gracefully on mobile.]

Logo:

⬡ Iceberg — green square icon (30×30px, border-radius 7px) containing the triangle/iceberg SVG mark. Font: Plus Jakarta Sans 800.

Nav links (centre):

How it works · Intro paths · Try it live · Why Iceberg · Pricing

CTAs (right):

○ SECONDARY CTA **Book a demo**

● PRIMARY CTA **See your universe →**

[DESIGNER NOTE: Primary CTA button: green background #22C55E, navy text #070E1C. Weight 700. Border radius 8px. Secondary: transparent with white-10 border.]

SECTION 02

Hero

[DESIGNER NOTE: Full-height hero. Two-column layout: copy left, Loom video right. Radial glow: sky blue top-right, green bottom-left. Subtle dot grid overlay across whole page.]

Eyebrow pill (green outline badge):

Sell-side M&A and capital raising · Boutique advisors

Headline (H1 — Plus Jakarta Sans 800, ~52px, letter-spacing -2px):

Double your deal output.

[DESIGNER NOTE: 'Double' rendered in green #22C55E. Rest white.]

Brutal subhead (left border accent — 3px solid green):

> **We do all the work you don't want to do — and your analyst struggles to do. Just upload your mandate and we'll show you the universe right in front of you.**

Body sub-headline:

The deepest investor/buyer universe on the planet. Full network visibility. Every contact scored, enriched, and continuously re-ranked as the market moves.

CTAs:

● PRIMARY CTA **See your investor/buyer universe in 30 seconds →**

○ SECONDARY CTA **Why Iceberg?**

Three stats (below CTAs, separated by border-top):

2× average deal throughput increase

150–300 high-conviction investors/buyers per mandate

20% of mandates declined on network confidence

Right column — video:

[DESIGNER NOTE: Mac window chrome: navy card, 3 traffic light dots, label 'iceberg — live mandate execution'. Then Loom embed: https://www.loom.com/embed/a2085c030d8041b782f072bda3044bf9?hide_owner=true&hide_share=true&hide_title=true&hideEmbedTopBar=true — aspect ratio 16:9. Caption below: 'Upload a CSV + PDF. Watch the entire buyer universe get built — in minutes.']

SECTION 03

Social Proof Bar

[DESIGNER NOTE: Full-width bar. Navy-800 background. 4 stats separated by 1px vertical dividers. Centre-aligned. Font: Plus Jakarta Sans.]

$700M+ in private deals supported with Iceberg buyer universes

100+ boutique advisors on the platform

80% more competitive mandates run with Iceberg

<1 month from mandate launch to competitive buying process

SECTION 04

Trust Strip

[DESIGNER NOTE: Thin strip on navy-800. Label above the scrolling names. Auto-scroll animation loops continuously left. Names in muted colour — not full white.]

Label above strip:

Advisors using Iceberg have come from all the biggest deal-doing organisations

Scrolling names:

Morgans · Blyth Advisory · Pacific Road Capital · Titan Capital · Reach Markets · PwC Capital · KPMG · Macquarie [loops]

[DESIGNER NOTE: Replace with real confirmed logos/names when available. Strip loops continuously.]

SECTION 05 — ID: #ASSISTANT

Deal Assistant (Live Universe Tool)

[DESIGNER NOTE: Placed early in the page — third section after proof bar + trust strip — to give advisors an immediate reason to engage. Navy-800 background. Centred layout. Max-width 780px. Mac window chrome on the input box.]

Section label:

TRY IT LIVE

Headline:

Most advisors find 5–10 names they should have called already.

Subhead:

Tell us about a deal. We'll show you what's in our universe — including the investors/buyers you should already be talking to.

Note below headline:

No signup. 30 seconds. Most advisors see contacts they didn't know were there.

Window chrome label:

iceberg — mandate universe analysis

Input prompt:

Describe your deal.

Sector, deal size, geography, stage. That's enough to get started.

Textarea placeholder:

E.g. We're running a $8M Series A for a B2B logistics SaaS in Sydney. Targeting Australian and Asian VC with ecomm or supply chain thesis. Open to strategic acquirers from 3PL incumbents…

Quick-start chips:

SaaS Capital Raise · M&A Trade Sale · PE Buyout · Infrastructure / Real Assets

● PRIMARY CTA **Show me my investor/buyer universe**

Result output (renders inline after API call):

[DESIGNER NOTE: Shows: deal title · matched thesis tags · table of investor/buyer types with counts + bar fills · totals block (DB count / warm intro pathways / sourceable range / ultra high quality) · analyst note · two CTAs. Warm intro pathways shown in sky blue. Ultra high quality total in green.]

● PRIMARY CTA **Get the full universe + book a pilot →**

○ SECONDARY CTA **Download this summary**

API call:

POST https://api.anthropic.com/v1/messages — model: claude-sonnet-4-20250514. Returns JSON: dealTitle, dealMeta, matchTags[], rows[] (type/db/pct), dbTotal, introPaths, sourceableMin, sourceableMax, ultraHighQuality, note.

SECTION 06

How Easy It Is — Upload Section

[DESIGNER NOTE: Navy-800 background. Two-column layout: animated file upload mock on left, copy + 3-step flow on right.]

Left column — file upload mock:

[DESIGNER NOTE: Dark card showing: (1) dashed upload zone with green border: 'Drop your mandate docs here · CSV · PDF · IM · Teaser · Contact list'. (2) Two 'attached' file rows: Solbox_IM_Final.pdf and existing_contacts.csv with green ✓. (3) Animated building bar with 3 pulsing dots: 'Building investor/buyer universe… 847 contacts matched'.]

Right column section label:

HOW EASY IT IS

Right column headline:

Upload a CSV and a PDF. The entire universe gets built.

> **That's it. No configuration. No setup call. No analyst hours spent googling investors.**

Drop in your Information Memorandum and existing contact list. Iceberg does the rest — building a fully enriched, ranked investor/buyer universe in minutes, not days.

We handle all the work you don't want to do and your analyst struggles to do. You focus on the relationships. We surface who to call and why.

Three-step flow (icon + title + desc):

Step 1: 📄 Upload your mandate — IM, teaser, or deal summary. Plus your existing contact list as a CSV.

Step 2: ⬡ Iceberg builds the universe — Deep sourcing across every relevant investor/buyer type. Ranked by mandate fit.

Step 3: 🎯 Start calling — Every contact enriched with why them, why now, and how to reach them.

[DESIGNER NOTE: Steps connected by a vertical dashed line on the left edge. Steps fade in on scroll.]

SECTION 07

The Problem

[DESIGNER NOTE: Navy-900 background (default). Two-column grid: brutal truth lines left, 3 stat cards right. Both columns fade up on scroll.]

Section label:

THE PROBLEM

Left column headline:

You don't lose mandates because of relationships. You lose them because you don't have clarity on who's ready to buy.

[DESIGNER NOTE: 'You lose them because...' section in italic, muted colour.]

Three stacked accent lines (green left-border, green-tinted bg):

> **You are declining mandates because you can't confidently run a competitive process.**
>
> **You don't know which investors/buyers in your network are active right now.**
>
> **Your network is bigger than you think. You just can't see all of it clearly.**

Dimmer context line (navy card, grey border):

Most boutique sell-side M&A and capital raising advisors run 3–6 mandates a year. Not because deal flow is the constraint. Because execution capacity is.

Conclusion:

Advisors who don't have this clarity are operating at a disadvantage. Not because they lack relationships — but because they can't see their full network clearly, can't identify who's active right now, and can't move fast enough when the market shifts. Iceberg fixes that.

Three stat cards (right column):

[DESIGNER NOTE: Each card: navy-700 bg, 1px border, green left accent bar (3px). Hover: border shifts to green.]

20% of mandates quietly turned down — not because the deal is bad, but because there's not enough confidence in the network to believe the process will be competitive.

80% of live deals less competitive than they could be. Warm pathways aren't mapped. Lookalike investors/buyers aren't found.

200–400 relevant contacts needed per mandate to build real competitive tension. Most advisors actively maintain a fraction of that — and don't know what they're missing.

SECTION 08

Use Cases — Three Situations

[DESIGNER NOTE: Navy-800 background. 3-column grid. Cards lift and show green top-line glow on hover.]

Section label:

WHEN ADVISORS USE ICEBERG

Headline:

Three situations. One platform.

Whether a mandate is on track, off track, or in a sector nobody's mapped yet — Iceberg builds the universe.

Card 1:

🚀 Mandates you want to win big

You have a mandate you're excited about. You want 200+ highly ranked, enriched investors/buyers with warm intro paths mapped — so you can run the most competitive process possible.

Tag: Wide universe build

Card 2:

🔧 Mandates that are off-track

Advisors always take on mandates that are a bit fringe for them, or that aren't going as hoped. We build the universe to get it back on track — surfacing buyers you haven't considered yet.

Tag: Universe rescue

Card 3:

🌍 Sectors nobody's mapped yet

Emerging sectors — web3, Southeast Asia, India, climate tech — don't have mapped contact networks. Analysts and firms looking to run deals in these spaces struggle to find the right buyers. We map those universes from scratch.

Tag: Emerging market mapping

SECTION 09

The Stack — Execution Layer Table

[DESIGNER NOTE: Navy-700 card, full-width 3-column table. Middle row (Iceberg) highlighted with green tint background and green top/bottom borders.]

Section label:

THE STACK

Headline:

Iceberg owns the execution layer.

Private market deals need three tool categories. Two are solved. The execution layer — the messy middle between finding a deal and closing it — has never had a purpose-built platform. Until now.

Table (Stage / Function / Platforms):

Row 1 — 01 · Sourcing / Find the deal / Grata · PitchBook · Inven

Row 2 (highlighted) — 02 · Execution / Run the deal: Investor/buyer universe, contact intelligence, warm intro paths, outreach, deal momentum — continuously updated / ⬡ Iceberg

Row 3 — 03 · Closing / Close the deal / Ansarada · Datasite

SECTION 10 — ID: #HOW

How It Works — 4 Steps + Universe Map

[DESIGNER NOTE: Navy-800 background. Section label + headline + sub. Core promise block (green tinted). 4 step cards in a row with a connecting horizontal line through the step numbers. Below steps: full universe card output demo.]

Section label:

THE PLATFORM

Headline:

From mandate upload to deal execution in minutes.

The spreadsheet + inbox workflow that boutique sell-side M&A and capital raising advisors still run today — replaced with a single execution platform.

Core promise block (green bg tint, green border, ⬡ icon left):

> **Upload a mandate. See the full investor/buyer universe. Know exactly who to call first — and how to reach them.**

Step 1 — green circle '1':

Upload the Mandate

Drop in your IM and existing contacts. Iceberg starts building immediately — no setup, no configuration.

- IM or mandate summary
- Your existing black book
- Sector and thesis context

Step 2:

Build the Investor/Buyer Universe

The deepest and broadest sourcing process on the planet. Not prompt-based search — structured universe building.

- Lookalike and adjacent investors/buyers
- Comparable deal participants
- Non-obvious, high-conviction matches

Step 3:

Map Every Intro Path

Every investor/buyer comes with the fastest path to reach them. Full network visibility across every possible route.

- 2nd-degree intro pathways
- Shared deal history signals
- Relationship distance scoring

Step 4:

Execute and Adapt

Run outreach inside Iceberg. As exits happen and engagement lands — the universe re-ranks. The right contact always surfaces first.

- Dynamic contact re-ranking
- Live market event triggers
- Engagement signal tracking

Universe map card (below steps, centred, max-width 700px):

[DESIGNER NOTE: This shows the actual output advisors get. Replicates the Solbox example. Dark navy-700 card. Green top border line. Shows: deal title + deal meta + LIVE badge. Transform widget (141 → ~300 + ~1,500 sourceable). Match tags. Table: VC 90 / Angels 61 / Strategic 53 / UHNW 9 with green bar fills. Intro callout (sky blue): '47 warm intro pathways identified'. Two floating chips: '3 exits detected — universe updated' and 'Blackbird re-ranked → #1 match'.]

Caption: 'This is what your deal looks like when fully mapped — live in the platform.'

SECTION 11 — ID: #INTRO

Intro Path Intelligence

[DESIGNER NOTE: Navy-900 background. Two-column: copy left, pathway cards right.]

Section label:

INTRO PATH INTELLIGENCE

Headline:

Every investor/buyer comes with the fastest path to reach them.

> **Full network visibility. As many paths to success as possible.**

When you upload a mandate, Iceberg maps every possible pathway to every investor/buyer in your universe — across your full black book and your firm's entire relationship graph.

You see the direct connections, the second-degree introductions, the shared deal histories. Complete visibility across every possible route, so you can choose the strongest path to every contact and never leave a warm pathway untaken.

Callout box (green tint):

Iceberg maps intro paths across your entire advisor network. As more advisors run mandates on Iceberg, the pathway graph deepens — creating cross-mandate intelligence that compounds over time.

Pathway cards (right column — 3 cards):

[DESIGNER NOTE: Card 1 (active/highlighted): James Chen — Partner, Blackbird Ventures — 94 match (sky blue). Sky-blue tinted route box: 'Warm intro via Michael Lee (your network · 1st degree) → James Chen. Michael co-invested with James in 2023. Response probability 4× vs cold.']

[DESIGNER NOTE: Card 2: Sarah Okonkwo — Principal, Square Peg Capital — 87 match. Route: '2° via Tom Walsh → Sarah Okonkwo · Tom is a current portfolio company founder at Square Peg']

[DESIGNER NOTE: Card 3: Lachlan Burns — MD, TDM Growth Partners — 81 match. Route: 'Direct — you have a 1st-degree connection from the Eucalyptus deal in 2022']

Footer: '+ 44 more warm pathways mapped ↓'

SECTION 12

Intelligence Layer — Contact as Asset

[DESIGNER NOTE: Navy-800 background. Two-column: copy + compound list left, enriched contact card right.]

Section label:

INTELLIGENCE LAYER

Headline:

Every contact tells you: why them, why now, and how to approach.

> **We value the underlying contact like a financial asset — structured intelligence that compounds across every mandate you run.**

Most CRMs store a name and an email. Iceberg builds a live intelligence profile on every active contact — continuously updated as the market moves, re-scored against every live mandate.

As you grow on Iceberg, the network compounds. Every deal adds cross-mandate signal. Every exit event updates deploy capacity. Every engagement builds a feedback loop that makes the next mandate sharper.

Three compound list items (icon + text):

- 🏦 Mandate relevance score — re-calculated every time the market moves or a document is updated
- 🔗 Intro pathway map — fastest route to every contact across your full advisor network

- 📊 Cross-mandate intelligence — which investors/buyers engage, which progress to diligence, who actually closes

Enriched contact card (right column):

[DESIGNER NOTE: Dark navy card with green top-border gradient. Avatar (green gradient, initials 'JC'). Name: James Chen. Role: Partner — Blackbird Ventures. Match score badge: 94 (sky blue). 2×3 data grid: Sector Focus / Stage+Check / Deploy Status (sky blue, 'Active · 2 deals in 90d') / Recent Exit / Last Co-investors / Intro Path (sky blue, 'Warm · 1.8° avg distance'). Green-tinted 'Why' panel at bottom.]

Why panel label: ⬡ Why this contact · Why now · How to approach

Why panel body: Recent Eucalyptus exit creates fresh capital to deploy. Logistics SaaS thesis is an exact match. 2 deals in last 90 days signals active velocity. Reach via Michael Lee (1°) — warm intro reduces friction significantly. Lead with the ESG angle.

SECTION 13

Dynamic Re-ranking

[DESIGNER NOTE: Navy-900 background. Two-column: ranked feed left, copy + trigger list right.]

Section label (right column):

DYNAMIC RE-RANKING

Headline:

The right investor/buyer. Every time the market moves.

> **Relationship tools tell you who you know. Iceberg tells you who to call for this deal, today.**

New exits create fresh capital. Comparable transactions reveal active acquirers. Engagement tells you who's paying attention right now. Iceberg continuously re-ranks against your live mandate.

Four trigger items (icon + text):

- 💰 Exit or liquidity event → re-score deploy capacity across all active mandates
- 🏦 Comparable deal closes in sector → update investor/buyer activity signals
- 📩 Engagement signal received → elevate contact priority immediately
- 📄 New document uploaded → re-rank universe against updated thesis

Ranked feed (left column — 4 contacts + 'more' row):

[DESIGNER NOTE: #1 (green border, green tint bg): James Chen — Blackbird Ventures · Series A · Logistics SaaS · Active deploy · signal: '↑ Exit liquidity' (sky blue badge)]

#2: Sarah Okonkwo — Square Peg Capital · Growth · B2B SaaS · $5M+ check · signal: 'Mandate match' (green badge)

#3: Lachlan Burns — TDM Growth Partners · Growth · Ecomm Infrastructure · signal: 'Engaged similar deal' (amber badge)

#4: Wei Zhang — Main Sequence Ventures · Deep Tech · Series A · New fund deploy · signal: 'New fund capital' (green badge)

Dashed row: '+ 137 more contacts ranked ↓'

SECTION 14

The Network Effect — FOMO Section

[DESIGNER NOTE: Navy-800 background. Two-column: copy + statement box left, three stage progression cards right.]

Section label:

THE NETWORK EFFECT

Headline:

Every mandate run on Iceberg strengthens the network.

[DESIGNER NOTE: 'strengthens the network.' in italic green.]

Iceberg isn't a tool you use once. It's infrastructure that compounds. Every mandate deepens the investor/buyer intelligence. Every exit event across the network updates every relevant universe simultaneously.

The advisors using Iceberg see more, earlier. They know which investors/buyers are active before the market knows.

Statement box (navy-600 bg, green border):

> **Every mandate run on Iceberg strengthens the network. The advisors using it see more, earlier. If you're not on it — someone else in your market is.**

[DESIGNER NOTE: 'If you're not on it — someone else in your market is.' in green #22C55E.]

Three stage cards (right column, darkening green icon):

Stage 1 — icon: semi-transparent green circle, label '1': 'First mandate' — Upload your black book. Iceberg maps your network, builds your first investor/buyer universe. You immediately see contacts you didn't know were there.

Stage 2 — icon: 65% green circle, label '2–5': 'Mandates compound' — Cross-mandate intelligence builds. Iceberg learns which investors/buyers engage, which progress, which close. Every universe gets sharper.

Stage 3 — icon: solid green circle, label '6+': 'Structural advantage' — Your network intelligence is now impossible to replicate with a tool stack. You know the market. You see who's active. You move first.

SECTION 15 — ID: #WHY

Why Iceberg — Comparison Section

[DESIGNER NOTE: Navy-800 background. Question framing callout at top. Tool strip. 2×2 grid of comparison cards. Net effect bar at bottom.]

Section label:

WHY ICEBERG

Question framing (navy-700 card, quoted):

"Why wouldn't we just use Perplexity + LinkedIn Sales Nav + RocketReach + Instantly?"

Headline:

Because that stack finds names. Iceberg builds an execution machine.

Every boutique sell-side M&A and capital raising advisor asks this. Here's the honest answer across the four dimensions that matter in a live deal process.

Tool strip (pill badges in a row):

Perplexity + LinkedIn Sales Nav + RocketReach + Instantly vs ⬡ Iceberg

1. Contact Coverage — Waterfall enrichment vs single source

THEIR STACK	ICEBERG
• LinkedIn → find people • RocketReach → try to get emails • Another tool if it fails • Gaps everywhere anyway	• **Waterfall search across multiple enrichment sources** • **Falls through layers until high-confidence contact found** • **Prioritises deliverability, not just availability**

⬡ **You're not "finding emails" — you're maximising reachable coverage across the entire investor/buyer universe.**

2. Depth of Sourcing — Universe building vs prompt-based search

THEIR STACK	ICEBERG
• Perplexity: "find investors in X" • Surface-level list, whoever shows up • Miss long-tail, non-obvious players • Limited to SEO-visible results	• **Deep, structured sourcing process** • **Expands into lookalikes, adjacent investors/buyers, cross-vertical** • **Surfaces non-obvious, high-conviction contacts you wouldn't find**

⬡ **This is the difference between searching and building a universe.**

3. Investor/Buyer Intelligence — Context and angle vs names on a list

THEIR STACK	ICEBERG
• Manually check LinkedIn profiles • Maybe skim a website • No consistent view on thesis fit • No signal on why now or how to approach	• **Structured intelligence: past deals, sector focus, behavioural signals** • **Surfaces why this investor/buyer, why now, what's the angle**

	• **Every contact is actionable, not just a name**

⬡ **You're not sending a list. You're giving a point of view on every investor/buyer.**

4. Execution Layer — Compounding infrastructure vs tool stack

THEIR STACK	ICEBERG
• Jump between LinkedIn, email tools, spreadsheets, CRM • No feedback loop between deals • No learning across mandates • Reset from scratch every deal	• **One system: upload mandate, generate universe, execute outreach** • **Built-in feedback loop — contacts improve, ordering sharpens** • **Cross-mandate intelligence compounds over time** • **Every deal makes the next one faster**

⬡ **This is the shift from tools to infrastructure.**

Net effect row (4 icons, below cards):

- 📬 Higher contact coverage — Fewer dead emails. More of the universe actually reachable.
- 🔍 Deeper universe — The investors/buyers who matter, including the ones you wouldn't have found.
- 🎯 Every contact actionable — Why them, why now, how to approach. Not just a name and an email.
- 🔄 Execution compounds — Every mandate makes the next one sharper. No more starting from zero.

SECTION 16 — ID: #PRICING

Pricing

[DESIGNER NOTE: Navy-800 background. 4-column pricing grid. 1,000-node tier featured (green border + glow). Each card has green mandate-capacity chip above price.]

Section label:

PRICING

Headline:

Priced on network intelligence. Not seats.

Activate the contacts you want enriched and monitored for your active mandates. Rotate nodes as deals change. Most boutique sell-side M&A and capital raising teams operate between 1,000 and 2,000 nodes. One additional mandate per year covers the platform cost multiple times over.

Four pricing tiers:

Tier 1 — 250 nodes / ≈ 1–2 mandates · 150–300 investors/buyers each / A$6,000 per year + GST

- Full investor/buyer enrichment
- Mandate relevance scoring
- Intro path mapping
- Market activity monitoring

Tier 2 — 500 nodes / ≈ 3 mandates · 150–300 investors/buyers each / A$12,000 per year + GST

- Full investor/buyer enrichment
- Mandate relevance scoring
- Intro path mapping
- Market activity monitoring

Tier 3 — 1,000 nodes [FEATURED — 'Most popular' badge] / ≈ 6–7 mandates · 150–300 investors/buyers each / A$24,000 per year + GST

- Full investor/buyer enrichment
- Dynamic re-ranking
- Cross-mandate intelligence
- Priority sourcing support

Tier 4 — 2,000 nodes / ≈ 13+ mandates · 150–300 investors/buyers each / A$48,000 per year + GST

- Full investor/buyer enrichment
- Dynamic re-ranking
- Enterprise dashboard
- Dedicated execution support

Pilot note (green-border box below cards):

30-day pilot is free. Upload a live mandate, activate network nodes, build the investor/buyer universe, and run outreach through the platform. No seat fee. After 30 days, choose the network size you want actively maintained. Any contact bundles purchased during the pilot are credited toward your first annual invoice.

SECTION 17

Pilot CTA — Full-Width Close

[DESIGNER NOTE: Navy-900 background. Centred inner box (navy-600/700 gradient, green border, green radial glow). Max-width 720px. High-contrast close.]

Section label:

30-DAY PILOT · FREE

Headline:

You are currently operating at a disadvantage.

Every week without full network visibility is a week where you're missing investors/buyers who are ready to move.

No seat fee. No commitment. Just clarity.

- PRIMARY CTA **See your investor/buyer universe →**
- SECONDARY CTA **Book a demo**

SECTION 18

Footer

[DESIGNER NOTE: Navy-900 background. Single row: logo left, links centre, copyright right.]

Appendix — Active Network Nodes Explained

The pricing model is built around Active Network Nodes. This concept needs to be clearly communicated on the pricing section.

What is an Active Network Node?

An Active Network Node is a contact that is actively enriched, monitored, and scored within Iceberg. Advisors can upload their full CRM or black book — but only nodes they activate receive ongoing intelligence updates.

What does an Active Node include?

- Identity and role verification
- Company and sector classification
- Investor or buyer type classification
- Mandate relevance scoring (re-calculated continuously)
- Introduction path mapping
- Comparable deal intelligence
- Market activity monitoring
- Continuous enrichment and data refresh

Can nodes rotate?

Yes. Nodes can be rotated as mandates change. An advisor running a logistics mandate in Q1 and a healthcare mandate in Q2 can swap which contacts are active between deals. The annual count is the maximum active at any one time, not a total over the year.

How many nodes does a typical firm need?

- 1–2 mandates per year → 250 nodes
- 3 mandates per year → 500 nodes
- 6–7 mandates per year → 1,000 nodes (most common for boutique advisors)
- 13+ mandates per year → 2,000 nodes (larger boutique or multi-advisor firms)

Appendix — Key Terms & Copy Rules

Always use both terms together

> **investor/buyer — never just 'buyer' or just 'investor'**

Iceberg serves both sell-side M&A (buyers) and capital raising (investors) mandates. Copy must always reflect this duality.

Core product promise (never change this line)

> **Upload a mandate. See the full investor/buyer universe. Know exactly who to call first — and how to reach them.**

The brutal truth lines (hero/problem section)

- You are declining mandates because you can't confidently run a competitive process.
- You don't know which investors/buyers in your network are active right now.
- Your network is bigger than you think. You just can't see all of it clearly.

The closing line (always uncomfortable)

> **You are currently operating at a disadvantage.**

The FOMO line

> **Every mandate run on Iceberg strengthens the network. The advisors using it see more, earlier. If you're not on it — someone else in your market is.**

The comparison punchlines (never soften these)

- You're not "finding emails" — you're maximising reachable coverage across the entire investor/buyer universe.
- This is the difference between searching and building a universe.
- You're not sending a list. You're giving a point of view on every investor/buyer.
- This is the shift from tools to infrastructure.
